

Jr React Software Developer - Vibe Coder

About the Role

We're looking for a **Vibe Coder** – a software developer who understands that great code in 2026 is about working smarter, not harder. You're someone who knows how to leverage AI tools to accelerate development, maintain code quality, and ship features faster without sacrificing reliability.

As a Vibe Coder on our team, you'll build web and mobile applications using React while managing the entire development lifecycle with AI as a first-class partner in your workflow. You're systematic, thoughtful, and pragmatic about how you use AI to create, review, test, and iterate on code.

What We're Looking For

Experience Level: 1-3 years of professional development experience

Core Technical Skills:

- Solid understanding of React fundamentals for web applications
- Experience with React Native, Expo, or similar frameworks for mobile development
- Comfortable with modern JavaScript/TypeScript
- Basic understanding of full-stack concepts (frontend, backend, databases)
- Version control proficiency (Git)
- **Proficiency in AI coding tools is a must** (Claude, GitHub Copilot, Cursor, or similar AI-assisted development platforms)

The "Vibe Coder" Mindset:

- You see AI coding assistants (Claude, GitHub Copilot, etc.) as productivity multipliers, not shortcuts
- You know how to write clear, contextual prompts that get AI to produce code you can trust
- You understand the difference between generating code quickly and generating *good* code quickly
- You're systematic about integrating AI output into your workflow – you read it, understand it, test it, and own it
- You balance speed with quality – shipping fast but not breaking things

Development Lifecycle Mastery:

DeepLearnHQ Corp
225 Sumach St, Toronto, Canada

- Create: Use AI to accelerate feature development while maintaining architectural consistency
- Manage: Organize AI-generated code, maintain clean project structure, document decisions
- Test: Write meaningful tests, validate AI output, catch bugs before they reach production
- Iterate: Learn from failures, refine your prompts, improve your development patterns

Responsibilities

- Develop responsive React web applications and React Native/Expo mobile apps
- Use AI tools effectively to write, review, and improve code while maintaining ownership
- Write and maintain unit and integration tests for all features
- Collaborate with team members to understand requirements and propose solutions
- Participate in code reviews, providing constructive feedback on AI-generated and human-written code
- Debug issues systematically and document solutions for future reference
- Stay current with React ecosystem developments and AI-assisted development practices
- Build features with an eye toward maintainability and testability from day one

Nice to Have

- Experience with TypeScript
- Familiarity with state management libraries (Redux, Zustand, Context API)
- Basic understanding of backend technologies (Node.js, databases, APIs)
- Experience with testing libraries (Jest, React Testing Library)
- Exposure to CI/CD pipelines
- Comfortable working in early-stage product environments
- Previous experience using AI coding assistants in production workflows

Why Join Us

- Access to latest AI tools including **Claude Code** and **Cursor Pro** versions – all licenses provided by the company
- Work with modern tooling and practices that actually increase developer productivity
- Freedom to use the best tools for the job, including AI
- Mentorship on developing AI-assisted development skills in a systematic way
- Opportunity to ship real products that users love
- A team that values thoughtful code over lines of code
- Growth opportunities as you develop deeper expertise in AI-augmented development

Location: ["Remote"]

Employment Type: [Full-time]

DeepLearnHQ Corp
225 Sumach St, Toronto, Canada

Compensation: PKR 100,000 - PKR 200,000 per month based on experience + quarterly performance bonus

We're committed to building a diverse and inclusive team. We encourage applications from people of all backgrounds and experiences.

Send resume to Saadahmed@deeplearnhq.ca with job title and name in subject line.
